In-House Servers

Simple, In-Premises Servers to keep your business running

In-office servers vary depending on your needs – from a designated PC right up to more powerful, complex, bespoke solutions.

Generally, they act as the 'brain' of your network, the place where all the data and information your organisation uses is stored. They can also be used to run very specific systems or processes within larger organisations, managing stock control or storing and managing customer accounts.

What can a server do for your business?

▽ Lets you keep your data in house – ideal if you're concerned about security or aren't ready to host in the "cloud" yet

▽ Can be integrated with other internal systems or other servers you have on-premises already – enhancing your existing investments

▽ Helps you store data centrally – making backups easier and reducing the risk of loss of data

▽ Lets you install and use specialist software that is designed for your industry

▽ Replace existing aging systems and benefit from faster performance, increased storage capacity and reduce the chance of equipment failure by proactively replacing your current system(s)

Add these services…

To go with the server, you should consider services that protect and maintain your server system(s):

▽ Proactive Server Maintenance and Monitoring Services – everything running smoothly all the time

▽ Backup Services – either on-premise or Remote Backup to safeguard your data from loss or corruption as well as disasters.

▽ Pre-Paid Support – our technical experts on hand when you need help most

What can a server do?

There are plenty of uses for your server – you may want to use it to store business data such as Word and Excel files. Perhaps you want an Exchange Server for business e-mail, or maybe you're looking to install a CRM System or new Finance Package that needs a server system…
A few functions a server could perform for you:

- File and Data Storage
- E-Mail Server
- Database Server
- Remote Access Services
- Finance System Server
- CRM Systems (eg. Customer Relationship Management)
- Internal "Web Portal" or Intranet System

What software do you need?

It all depends what you need to do. For many small businesses software such as "Microsoft Windows Small Business Server" are ideal and perfectly pitched for many setups with for 10-50 users.

If you're thinking of installing a particular software product – for example a specific finance package or have a new system being installed that needs a server, speak to our team and we'll advise on the right system for you.

If you're not sure what software you want, we can even help you with this too – tell us what your business needs to achieve, and we'll give you clear guidance on the correct solution that matches the needs of your business – we'll make your IT easier!

What does it cost?

The cost of a server depends on the specification of the server, the cost of any software licenses you need to buy and whether an older system or data needs to be imported onto it. Our team can provide straightforward guidance and fixed costs.
