

# Networking Services

## Whether you want a new network or to improve an old one...

Networks are the heart of a typical business IT system. They allow you to share Internet Access, access files from a central resource, access printers and much more.

Getting a reliable network is important to the overall reliability of your IT, and simply plugging everything in together isn't always adequate – and almost always gives you sub-standard performance.

Fortunately the team at VPW know how to help your network perform better – and can help you install networking (from physical cabling to advanced network switching systems) as well as upgrade, repair and maintain existing systems.

## What can VPW do for your network?

- ❑ Install it – if you're moving office, taking on extra space or deciding you need a more robust network we can install everything from cables to cabinets.
- ❑ Repair it – If there is something wrong – damaged cables, poor performance or intermittent connections
- ❑ Improve it – help you upgrade cabling, switches and other equipment to give your network a boost
- ❑ Maintain it – for advanced networks, managing the equipment and systems to ensure the best possible performance and help you out if something goes wrong

## How much does it cost?

The cost all depends on what you need and what you've already got. Fortunately we give you a clear guide to costs once we've assessed your needs so you're in control and can understand what's needed

## What about Wireless?

We can also provide Wireless Networks – including private networks and public access networks – speak to our team to find out more on how we can get you connected without wires
